LVST Loud

Highly effective, evidence-based, speech therapy designed to improve communication and quality of life for those living with Parkinson's Disease and other neurological populations. Scientifically validated over the last 30 years with research, funding from the National Institute of Health and other organizations, LSVT LOUD is the only speech treatment with level one evidence for people with Parkinson's Disease.

What has LVST LOUD documented

- Increased vocal loudness
- Improved articulation and speech intelligibility
- Improved intonation
- Improvements in facial expression
- Changes in neural functioning related to voice and speech

LSVT LOUD

LSVT LOUD is a standardised treatment protocol that is customised to the unique communication goals of each client. LSVT LOUD can result in improvements in clients across a range of disease severities and communication impairments.

Most clients do not need a referral unless you are claiming through Lifetime Care and Support, Medicare (EPC) or Workers Compensation.

LSVT LOUD treatment consists of:

1. 16 sessions, 4 consecutive days a week for 4 weeks
2. 60-minute one-on-one therapy sessions
3. Daily homework and carryover exercises
4. Personalised communication activities and goals

This dosage is consistent with principles of neuroplasticity and proven by years of research. It is essential that LSVT LOUD treatment is only delivered by speech-language pathologists who are certified in this method.

*Note: LSVT LOUD is the only product name associated with these evidence-based and highly effective treatments.
